

TITAN-T5

Compact all-aluminum portable computer enclosure for MicroATX or Passive Backplane motherboards.

- ◆ All Aluminum Construction
- ◆ Build-in 12.1", 13.3" or 14" TFT LCD Screen
- ◆ MicroATX or Passive Backplane form factor platform
- ◆ Up to 4 full length expansion slots
- ◆ Up to 4 shock-mounted drive bays
- ◆ Detachable keyboard with integrated pointing device

Titan-T5 is smallest portable computer enclosure from the Titan all-aluminum family. It is built to be rugged, expandable, upgradable and customizable with standard off-the-shelf (SOTS) components. The T5 are available in two models, a standard MicroATX or a 8 slots passive backplane form factor platform. SOTS MicroATX motherboards and backplanes single-board-computer support a wide range of Slot-1 and Socket-370 processors from Intel and AMD. Providing more processing power than most desktop computers. SOTS also increases the product life cycle by not being obsolete in this fast changing industry. Also reducing maintenance and down time.

Other features of the T5 include up to 4 full length add-in slots; up to 4 drives with shock mounted cage; various selection of display sizes from 12.1" to 14.1"; a 104 keys mechanical or weather proved keyboard with integrated pointing device; rubber bumper protected corners and more. All of the ruggedness of an aluminum construction weight only 28lbs. when fully configured.

Card Retention System

T5 has a double card retention system for double protection that holds individual add-on cards securely in two points, with an adjustable pressure mechanism. Now half and full length cards are always in place during transport.

LCD Screen

A 3mm impact resistance glass protects the display from harsh and unfriendly environments. Display sizes are available in 12.1", 13.3" or 14.1".

System Cooling

Two intake fans are efficiently placed to draw in fresh air blowing directly at the add-in cards. The enclosure was designed to allow air to flow through guided path then draw the warm air out from the exhaust fan in the power supply. The intake fans have a removable washable filter, which keeps dust and unwanted particles away from the system.

Power Supply

Power supply is available in several options including standard industrial strength 300W ATX type for the MicroATX model and a PS-2 type with optional build-in UPS or AC/DC/Battery all-in-one for the passive backplane model.
